NAME OF THE PROPERTY OF THE PR

```
1 beta (HNF-1 beta), deduced from a partial gene sequence (see AAV52729). HNF-1 beta is a homeodomain-containing transcription factor. Mutations in HNF are indicative of a propensity to diabetes mellitus. The invention concerns the identification of genes responsible for non-insulin dependent diabetes mellitus (NIDDM) for use in diagnostics and therapeutics. It demonstrates that the WODY3 locus is the HNF-1 alpha gene (see AAV52632), the WODY4 locus is the HNF-1 beta gene (see also AAV52730) and the MODY1 locus is the HNF-4 alpha gene (see AAV52687). Analysis of mutations in these HNF genes can be diagnostic for diabetes. The invention also provides
                                                                                                                                                                                                                                                                                                                         Isolated nucleic acid encoding hepatocyte nuclear factor 1-alpha and 1-beta - useful for detecting susceptibility for non-insulin dependent diabetes, especially maturity-onset diabetes of the young
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      genes can be diagnostic for diabetes. The invention also provides methods of utilising HNF nucleic acids and polypeptides in screens for modulators of HNF function, the modulators being useful for treating diabetes by modulating HNF function in an animal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                         This is the amino acid sequence of human hepatocyte nuclear factor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Hepatocyte nuclear factor 1 alpha; HNF-1 alpha; MODY3; human;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  /note= "DNA binding domain with POU-like and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Ϊ;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     concerns the identification of genes responsible for non-insulin dependent diabetes mellitus (NIDDM) for use in diagnostics and therapeutics. It shows that the NODY3 locus is the HNF-1 alpha gene, the MODY4 locus is the HNF-1 beta gene (see AAV52780) and the MODY1 locus is the HNF-1 beta gene (see AAV52687). Analysis of mutations these HNF genes can be diagnostic for diabetes. The invention also contemplates methods of screening for modulators of HNF function utilising HNF nucleic acids or polypeptides, the modulators being useful for treating diabetes by modulating HNF function in an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This is the amino acid sequence of a mutant (R131Q) form of human hepatocyte nuclear factor 1 alpha (HNF-1 alpha, see also AAW71559) that arises from a missense mutation (G to A) of codon 131 of the coding region of the HNF-1 alpha gene (see AAV52656). The mutation has been detected in a patient with the MODY3 (maturity onset human, rat, mouse, hamster, chicken, Kanopus and salmon HNF-1 alpha suggesting this residue to be functionally important. The invention
                                                                                                                                                                                                                                                                                                                                                                                  Isolated nucleic acid encoding hepatocyte nuclear factor 1-alpha and 1-beta - useful for detecting susceptibility for non-insulin dependent diabetes, especially maturity-onset diabetes of the young

                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This is the amino acid sequence of human hepatocyte nuclear factor I alpha), a homeodomain-containing sequence-specific DNA bidding protein. A cDNA sequence (see AAV52624) encoding HNF-1 alpha is provided. Mutations in this transcription factor are indicative of a propensity to diabetes mellitus. The HNF-1 alpha gene is located on human chromosome 12q, which is the location site of the NDD3 (maturity onset diabetes of the young) locus. The invention concerns the identification of genes responsible for non-insulin dependent diabetes mellitus (NIDDM) for use in diagnostics and therapeutics. It demonstrates that the MODY3 locus is the HNF-1 alpha gene (see AAV55730) and therapeutics. It demonstrates that the MODY3 locus is the HNF-1 beta gene (see AAV55730) and that one in these HNF genes can be diagnostic for diabetes. The invention also contemplates methods of screening for modulators of mutations in these HNF genes can be diagnostic for diabetes. The invention also contemplates methods of screening for modulators being useful for treating diabetees by modulating HNF contention in an animal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                                                                                                                                                                                                                                                                                                                                           Isolated nucleic acid encoding hepatocyte nuclear factor 1-alpha and 1-beta - useful for detecting susceptibility for non-insulin dependent diabetes, especially maturity-onset diabetes of the young
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                1;

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    A:Map position: 12924.3-12924.3
C:Complex: homodimer; can also form heterodimers with, for example, HNF-IA form A
C:Function:
A:Description: transcription activator required for the expression of a number of liver-A:Note: this form is a more potent transcriptional activator than the A form
C:Superfamily: transcription factor HNF-I; homeobox homology
C:Keywords: alternative splicing; DNA binding; homeobox, liver; nucleus; transcription r
F:1-33/Region: dimerization
F:222-27//Domain: homeobox homology <HOX>
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     transcription factor HNF-1A - mouse

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  A.Note: only a part of the nucleic acid sequence is shown c.genetics:
A.Gene: Hnf-1
A.Introns: 238/2
A.Note: the list of introns is incomplete
C.Complex: homodimer; can also form heterodimers with, for example, HNF-1B
C.Function:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   R; Baumhueter, S.; Mendel, D.B.; Conley, P.B.; Kuo, C.J.; Turk, C.; Graves, Genes Dev. 4, 372-379, 1990

A.Genetics:
A.Thirons: 238/2
A.Inhirons: 238/2
A.Note: the list of introns is incomplete
C.Complex: homodimer; can also form heterodimers with, for example, HNF-1B
C.Function:
A.Note: also expressed in other tissues (kidney, stomach, intestine), where it may play
C.Superfamily: transcription factor HNF-1; homeobox homology
C.Superfamily: heterodimer; homeobox homology
C.Superfamily: nucleus; transcription
F.1-33/Region: dimerization
F.22-277/Domain: homeobox homology <a href="https://domain.nucleus">https://domain.nucleus</a>; transcription

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  -!- FUNCTION: AMPK IS RESPONSIBLE FOR THE REGULATION OF FATTY ACID SYNHHESIS BY PHOSPHORYLATION OF ACETYL-COA CARBOXYLASE. ALSO REGULATES GHOLESTEROL SYNTHESIS VIA PHOSPHORYLATION AND INACTIVARION OF HYDROXYMETHYLGLUTARYL-COA REDUCTAGE AND HORMONE-SENSITIVE LIPASE. THIS IS A REGULATORY SUBUNIT. IT MAY PLAY A ROLE IN THE REGULATION OF ENDERGY METABOLISM IN SKELETAL MUSCLE.
-!- SUBBNIT: HETEROTRIME OF AN ALPHA CATALYTIC SUBUNIT, A BETA AND A GAMMA NON-CATALYTIC REGULATORY SUBUNITS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ORIGINATED IN THE HAMPSHIRE BREED PIGS AND HAS BENEFICIAL EFFECTS ON MEAT CONTENT BUT DETRIMENTAL EFFECTS ON PROCESSING YIELD. THUS, THIS MUTATION IS OF CONSIDERABLE ECONOMIC SIGNIFICANCE IN THE PIG
                                                                                                                                                                                                                                                                                                                                                                                                         Gaps

-! FUNCTION: NEBRONAL PHOSPHOROTEIN THAT COATS SYMAPIC VESICLES,
BINDS TO THE CYTOSRELETON, AND IS BELIEVED TO FUNCTION IN THE
REGULATION OF NEUROTRANSMITTER RELEASE (BY SIMILARITY).

-! SUBCELLUIAR LOCATION: SYMAPSE.

-! ALTERNATIVE PRODUCTS: 2 ISOFORMS; SYNAPSIN IA AND SYNAPSIN IB
(SHOWN HRRE); ARE PRODUCED BY ALTERNATIVE SPLICING.

-! PTM: SUBSTRATE OF AT LEAST FOUR DIFFERENT PROTEIN KINASES. IT IS
FROM THAT THAT PHOSPHORILATION PLAYS A ROLE IN THE REGULATION OF
SYNAPSIN IN THE NEWE TERMINAL (BY SIMILARITY).
